Abstract of JP 2001325165 (A)

PROBLEM TO BE SOLVED: To provide a hardware fault monitoring system by which generation of faults in hardware such as a CPU, a memory, a HD, a LAN, an expansion board, a UPS, etc., can be promptly and exactly grasped at a remote monitoring center by transmitting and receiving information through a network. **SOLUTION:** The hardware fault monitoring system consisting of the fault monitoring computer 2 to monitor the faults of the hardware 11 such as the CPU, the memory, the HD, the LAN, the expansion board, the UPS and a computer 3 for monitoring center and in which the fault monitoring computer 2 and the computer 3 for monitoring center transmit and receive the information through the network 5 is provided with a function to monitor the faults of the hardware 11 such as the CPU, the memory, the HD, the LAN, the expansion board, the UPS, a function to monitor error messages in relation to the hardware, an OS and a RAID, the UPS and a function to report an operating state of the hardware to a computer 16 for hardware manager.
